Secure file transfer using SSH with enhanced audit and automation. SFTPPlus™ has been developed in close co-operation with a major insurance company and provides a cost effective solution to regulatory and corporate compliance requirements.

## SFTPPlus

This is a fully supported server and client for enterprises who wish to use the security of SSH and open standards together with additional audit and automation for enterprise file transfers. Installed at one side of the data transfer SFTPPlus allows transfers to be made to/from internal as well as third party external SFTP servers/clients with no requirement for additional software at the other side.

## Server Edition – Features

- All actions audited
- Alerts raised for specified conditions – including email
- Option to retrieve a response file after a successful upload
- Date and timestamp added to avoid duplicate names
- Pre and post processing available for transfers
- All files archived with a date & time stamp
- Centralised Administration
- Database for authentication

## Client Edition – Features

- Automatic transfer to single or multiple destinations of any file
- Monitor an 'inbox' directory for a file, or wait for a triggering event
- Take a copy of the file and generate a checksum
- All actions audited
- Alerts raised for specified conditions – including email
- Checkpoint restart
- Option to retrieve a response file after a successful upload
- Date and timestamp added to avoid duplicate names
- Pre and post processing available for transfers
- SFTPPlus runs as a service in windows daemon in Unix
- All files archived with a date & time stamp
- Automated restart
